Recruitment Team
Leidos
1234 Technology Drive
Orlando, FL 32801

Dear Hiring Manager,

I am writing to apply for the Software Development Intern position supporting Internal Research and Development at Leidos. I am a senior at the University of Central Florida pursuing a B.S. in Computer Science with minors in Mathematics and Physics, graduating May 2026 with a 4.0 GPA. I am eager to apply my background in AI, data engineering, and software development to contribute directly to the national security missions Leidos supports.

My experience as a Systems Engineer has given me direct exposure to building the kinds of data pipelines and analytical systems this internship calls for. I transformed a threat intelligence dashboard with live API calls and scheduled Splunk searches using optimized lookup tables. I also automated the classification of threat data across many intelligence feeds from platforms like CIRCL, ThreatFox, and CERT-EU, by configuring feed level tagging rules in MISP. The work of transforming raw, unstructured security telemetry into analysis ready formats maps directly to the data pipeline and AI/ML data preparation responsibilities described in the posting.

Beyond data engineering, I bring hands on experience with prototyping and multidisciplinary collaboration. As project lead for a Lockheed Martin sponsored autonomous drone swarm search and rescue system at UCF, I developed the GUI, refactored the codebase into a modular architecture, and implemented tile caching with LRU eviction to improve real time map responsiveness. I worked with our Lockheed Martin sponsor to transition the system from simulation to Jetson Nano hardware deployment, an experience that closely mirrors the simulation, modeling, and decision support tool development Leidos describes. I have also applied computer vision techniques in a personal project where I used OpenCV and NumPy.

The opportunity to work alongside researchers and engineers solving problems at the intersection of machine learning and national defense aligns with both my applied mathematics foundation and my hands on experience prototyping systems for defense partners. I am confident that my combination of data engineering skills, collaborative project experience, and security operations background makes me well suited to contribute meaningfully to these efforts.

I welcome the opportunity to further discuss my qualifications. Thank you for your time and consideration.

Sincerely,

A handwritten signature in black ink, appearing to read 'Giorgio Torregrosa', followed by a horizontal line.
